

Request to add non-covered features to a Lingraphica® Speech-Generating Device

NOTICE:

Lingraphica® speech-generating devices (SGDs) are medical devices for which the primary purpose is functional communication. As described by CMS (Medicare), the features covered for the purpose of functional communication are: generated speech, e-mail, text messages, and phone messages. CMS and other insurance companies do not offer coverage, and will not pay for features, or support of features, that fall outside of this definition. As such, the beneficiary may be responsible for any costs associated with the addition of non-covered features to their Lingraphica® SGD.

Financial:

Lingraphica does not charge for adding additional, non-covered features to our SGDs.

Technical Support:

Lingraphica provides free lifetime technical support for all of its SGDs to ensure that users have a fully operational device for the primary purpose of functional communication. Installing additional, non-covered features, including connecting to the Internet for uses beyond the stated purpose of functional communication, may interfere with the operation and performance of the device. Any support for such additional, non-covered features may involve a fee for support services rendered, including the cost to ship the device.

Statement of Acknowledgement:

I have received, understand, and agree to the terms of this notice and request that additional, non-covered features be added to my SGD.
